Topic

Data Exchange: Message/Packet Switch (2)

Copyright © 2017, 2013, 2010 Pearson Education, Inc. All Rights Reserved

store-and-forward

- Both message exchange and packet exchange use store-forward exchange.
- Difference:
 - ☐ Message exchange "store-forward" with full message
 - ☐ Packet switching "store-forward" in smaller groups
- Which exchange method is better?

Packet switching: Transfer delay.

Source:

- ☐ Receive application messages
- ☐ Split into smaller packets with length L bits
- ☐ Transmission of packets on a link with a transmission rate of R

$$\text{Delay} = \frac{L \text{ (bits)}}{R \text{ (bits/sec)}}$$

Message switch vs Packet switch?

Message Exchange:

- The message length is M bits.
- The link bandwidth is R bps.
- Each transmission of the message requires M/R seconds.

Packet switching:

- Messages are split into packets.
- The packet length is L bits.
- The delay for each packet transfer is L/R seconds.

•

e.g.

❖ $M=7.5$ Mbits,

$L=1500$ bits

□ $M=5000L$

❖ $R = 1.5$ Mbps

□ Message switch:

□ The delivery time of the message = ? sec

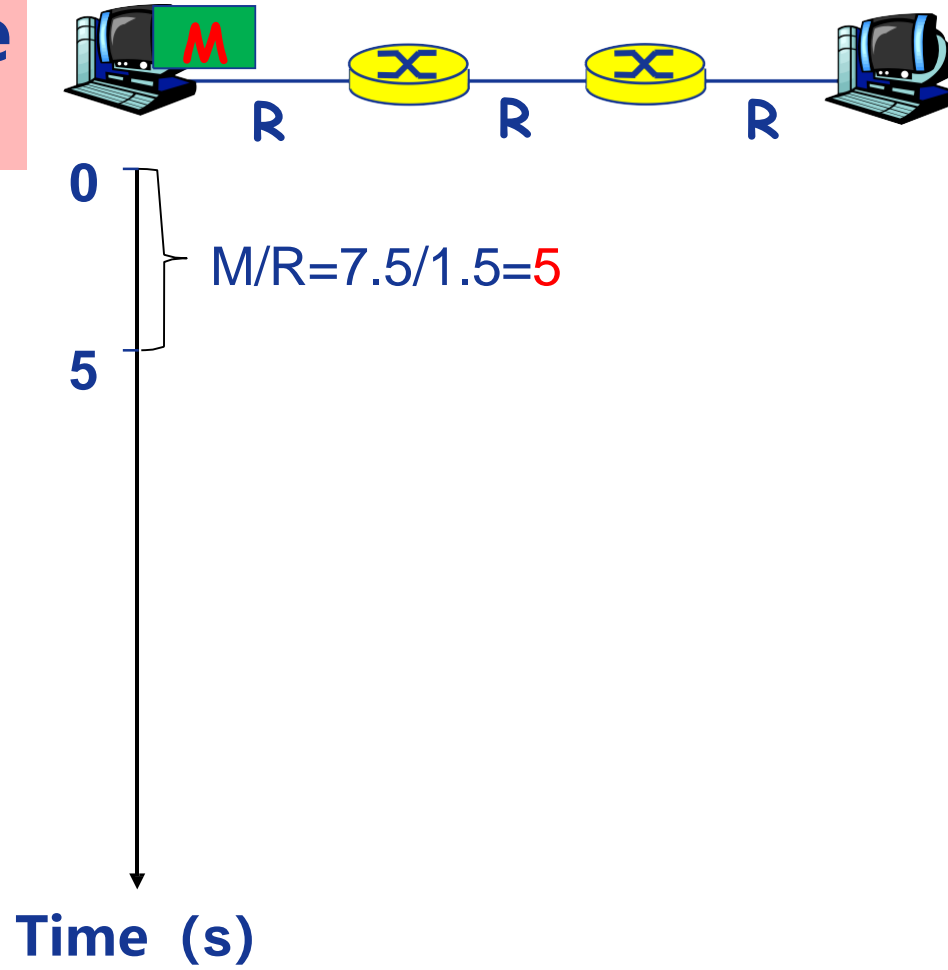

□ Packet switch:

□ The delivery time of the message = ? sec

Message switch vs Packet switch?

Message switch

Message switch vs Packet switch?

Message switch

Message switch vs Packet switch?

Message switch

e.g.

- ❖ $M = 7.5$ Mbits,
 $L = 1500$ bits

- $M = 5000L$

- ❖ $R = 1.5$ Mbps

- ❖ Message switch:

- The delivery time
of the message = **15 s**

- ❖ **How much cache does
the router need?**

Message switch vs Packet switch?

Packet
switch

0
1

$L/R = 1500 / (1.5 \times 10^6) = 1$

Time (ms)

Message switch vs Packet switch?

Packet

Packet
switch

Message switch vs Packet switch?

Packet switch

e.g.

- ❖ $M = 7.5$ Mbits,
 $L = 1500$ bits
 - $M = 5000L$
- ❖ $R = 1.5$ Mbps
- ❖ Packet switch:
 - The delivery time of the message
 $= 5002$ ms
 $= 5.002$ sec
- ❖ **At least how much cache does the router need?**

The delivery time of the message for the packet exchange

- Message: M bits
- Link bandwidth (data transfer rate): R bps
- Packet length(size): L bits
- #hops: h
- #routers: n

$$T = M/R + (h-1)L/R$$
$$= M/R + nL/R$$

Thank you!
